

New! KX1 Ultra-Portable Transceiver

- Weighs 9 oz.
- 2 or 3 bands
- Up to 4 W
- DDS VFO
- SWL Receive
- Internal ATU
- Internal battery

Our **KX1 CW transceiver kit** is the new featherweight champ! With all controls on top, it's ideal for trail-side, beach chair, sleeping bag, or picnic table operation. And at 1.3"H x 5.3"W x 3"D, it's truly pocket size. Its superhet receiver covers ham *and* nearby SWL bands; the variable-bandwidth crystal filter handles CW, SSB, and AM. Also features memory keyer, RIT, 3-digit display, audible CW frequency readout, and a white LED logbook lamp. The internal battery provides 20 to 30 hours of casual operation. Add our **KXPD1 paddle** and **KXAT1 automatic ant. tuner** options to create a fully-integrated station. **KX1** basic kit covers 20 & 40 m (\$279). **KXB30** adds 30 m (\$29).

K1 and K2 Transceivers

The compact **K1** 4-band, 5 watt+ CW transceiver kit is great for first-time builders, draws only 55 mA on receive, and makes a great travel radio. The **K2** transceiver kit offers incredible receiver performance, all-band SSB/CW coverage, & optional DSP. It can be configured for 100 watts when the going gets rough. Both transceivers have internal battery and automatic antenna tuner options. Please visit our web site for details on our full line of high-performance kits.

Drive-on Antenna Mount

New!

3.5-4mhz with optional coil (only with MP-1)

5.5-21' Collapsible Mast

Portable Yagi System

Portable Dipole System

New!

SDC 100
Screw Drive Controller

MP-1

The MP-1 will fit into a briefcase with a K-2 , FT817 or any other small rig. It's universal mount allows it to be setup on most any object that is handy at any angle. Also works with 2 meter and 70cm bands.

MP-2

The MP-2 & MP-3 antenna is an motorized hybrid of the Mp-1 antenna. It features remote controlled motorized servo mechanisms to easily adjust the HF bands. The MP-3 antenna is a mobile mount servo controlled

MP-3

AMERICAN MORSE EQUIPMENT

Made in
USA!

Incredible feel in a miniature paddle! Fully adjustable, lightweight & extremely durable. CNC machined from billet aluminum. Gorgeous anodized finish.

Software Defined Radio Transceiver The FlexRadio SDR-1000

- 11KHz-65MHz RX
- Multimode TX/RX
- 1-100W TX (w/ PA)
- PC Based DSP
- Open Source

**100W PA
Now Taking Orders!**

From AC50G's QEX series, "A Software Defined Radio for the Masses."

Enjoy the future of amateur radio today. The SDR-1000 converts your PC and sound card into a flexible software defined transceiver. Since all modulation, demodulation and control functions are defined in open source, Microsoft Windows software, it's the radio that just keeps getting better! Software upgrades are free and frequent, with contributions from amateur experimenters worldwide. The SDR-1000 has something to offer almost everyone: experimenter, contester, microwave or weak signal enthusiast, digital mode operator, or just plain rag chews. It provides multimode general coverage RX from 11KHz through 65MHz and 1W PEP TX (100W HF PA optional) on all ham bands from 160M-6M. As a bonus, the receiver functions as a high dynamic range spectrum analyzer. You will be amazed at the brick wall software filters that offer a 500Hz filter shape factor of 1.05:1. An all-digital AGC eliminates weak signal compression (pumping) due to strong nearby signals. Start with the assembled and tested SDR-1000 board set and then add an optional enclosure kit, low noise RF front end, 100W PA, 144MHz transverter IF, and automatic antenna tuning unit. Visit our website to read the articles and learn more about the SDR-1000, including minimum PC and sound card requirements.
